Li–Rinzel equilibrium spectra in the trace–determinant plane
a Full equilibrium branches
b Transition region
LR regime
AM, $K_{ER} = 0.1\,\mu$M
AFM, $K_{ER} = 0.075\,\mu$M
FM, $K_{ER} = 0.05\,\mu$M
Determinant $D = \det J$ (s^{-2})
Trace $T = \mathrm{tr} J$ (s^{-1})
stable node
stable focus
saddle
unstable node
unstable focus
Arrows indicate increasing I; dots mark I ≈ 0. Dashed: T = 0; dotted: D = T² / 4.
